AUNOA

Fullstack Developer

- Maintenance and evolution of a platform focused on creating chatbots based on workflows, internal databases, and analytics.
- Development, updating, and debugging of REST APIs, frontend modules, and cloud integrations within a full-stack architecture.
- Work with infrastructure components and distributed systems such as Redis, RabbitMQ, Vault, ClickHouse, Jenkins, and Google Cloud Platform.
- Leadership in the redesign of the WhatsApp template and workflow creation process, adding new types to existing ones and improving the interface to make it more user-friendly.
- Participation in the development of a VoIP contact center architecture based on Asterisk, WebRTC, and Kamailio, integrating voicebots powered by OpenAI Whisper and enabling smooth handoff to human agents.
- Direct collaboration with clients during development and maintenance phases, providing technical support and functional guidance on implemented solutions.
